

ITUtility.NET Enhanced Anti-spam Service

“The Ultimate in Email Protection”

- 1** Highest spam protection
- 2** Detects over 99% of all spam
- 3** Worry-free spam filtering

Feature	Description
The ultimate in protection	LastSpam achieves the following: <ul style="list-style-type: none"> • Sustained 99%+ interception efficiency level, with • False positive rates of 0.0005 or less.
Premium spam detection	Three anti-virus scanning engines provide an added, outer layer of security before email traffic hit the gateway. These niche engines complement each other and their technologies augment products likely to be directly deployed behind customer gateways: <ol style="list-style-type: none"> 1. Norman (including Norman SandBox technology, which detects new, unknown viruses at the very moment of circulation through an industry-unique simulation), 2. ClamAV (Open-source protection), and 3. BitDefender (well-known for its track record of quick reaction times during virus outbreaks).
Real-time and file-type filtering	Real-time extension and file-type filtering is continually improved to keep pace with round-the-clock changes in spamming, phishing techniques and malware technologies. Infrastructure uses a carefully-managed combination of multiple anti-spam and filtering technologies. LastSpam continually adds new technologies, filtering methods and improvements to the system.
Protection against new and hidden threats	A competitive advantage with LastSpam is in its ability to quickly respond to new and hidden threats. LastSpam constantly implements new ways of blocking spam and dangerous emails faster than hardware/software providers that must PUSH updates and fixes to thousands of servers or appliances. The main differentiator for LastSpam is its focus on a singular service, rather than multiple development activities. The managed service model deployed by LastSpam enables a quick-time to market for its email protection services to block spam and other email threats ahead of well-known vendors and email security solutions. The round-the-clock management of the filtering techniques used by LastSpam has lead to its performance superiority in the marketplace.
Administrator Console	This service includes an administrator console to adjust service settings for false positives and white and black lists.

Note: The upgrade to the ITUtility.NET Enhanced Anti-spam Service combines the LastSpam Service with the Microsoft Forefront Security Service for Exchange Server to deliver the ultimate in email protection.
